

THE ANATOMY OF A DIGITAL FRAUD

*An Investigative Thesis on the Lunar Astro Scam and the
Trajectory of Deepanshu Giri*

Prepared by: The Digital Consumer Watchdog Group

Date: March 2026

CHAPTER 1

The Illusion of Success: Early Life and Engineering Aspirations

The genesis of the Lunar Astro enterprise cannot be understood without first examining the foundational years of its founder, Deepanshu Giri. Long before he donned the mantle of a spiritual guide and master astrologer, Giri was an aspiring engineer. He pursued an education in robotic engineering, a field characterized by rigorous logic, empirical evidence, and precise mathematics. The discipline requires a mind capable of objective analysis and a tolerance for verifiable, binary outcomes—a robot either functions as programmed, or it does not.

However, the transition from academic theory to professional success proved to be an insurmountable hurdle for Giri. Despite his educational background, he struggled to find a foothold in the highly competitive engineering sector. His inability to succeed in a field that demands tangible results and verifiable skills laid the psychological groundwork for his later pivot. The frustration of repeated failures in a meritocratic environment fostered a deep-seated resentment, pushing

him toward domains where subjective interpretation could effectively mask a lack of substantive expertise.

CHAPTER 2

The Overseas Mirage: Failure in the Shipping Industry

Faced with a stagnant career in robotic engineering, Giri sought opportunities abroad, hoping that a change of geography would catalyze professional success. He secured a position with an overseas shipping company, a demanding environment that requires resilience, adaptability, and technical proficiency under extreme pressure. The maritime industry is notoriously unforgiving, demanding strict adherence to hierarchy and operational excellence.

Unfortunately, this venture mirrored his earlier failures. The grueling conditions and strict performance metrics proved incompatible with Giri's capabilities. His tenure overseas was marked by a lack of progression, mounting frustrations, and an inability to integrate into the demanding maritime culture. The realization that geographical relocation could not compensate for fundamental professional inadequacies forced him to return to his home country. He arrived back not as a triumphant expatriate, but with his ambitions shattered and his career prospects bleaker than ever.

CHAPTER 3

The Downward Spiral: Return and the Onset of Depression

The return from his unsuccessful overseas stint marked the beginning of a dark and turbulent chapter in Giri's life. Stripped of his professional identity and facing the societal stigma often associated with failure, he plunged into a severe clinical

depression. The stark contrast between his initial grand aspirations in robotic engineering and his current reality created a profound cognitive dissonance.

During this period, Giri was unemployed, directionless, and grappling with a deep sense of inadequacy. He withdrew from social circles, unable to face the scrutiny of peers who were advancing in their respective careers. This psychological vulnerability is a critical factor in understanding his subsequent transformation; it was in this crucible of despair, stripped of ego and professional standing, that the seeds of his future exploitative enterprise were sown. He was a man desperately searching for a shortcut to the top.

CHAPTER 4

Fractured Foundations: Marital Discord and Separation

The professional and psychological turmoil Giri experienced inevitably bled into his personal life, causing catastrophic damage to his closest relationships. The stress of his failed career, coupled with his deepening depression and financial instability, placed an unbearable strain on his marriage. The home, rather than being a sanctuary, became a battleground of unmet expectations and emotional volatility.

Frequent conflicts with his wife escalated as his mental health deteriorated. The inability to provide stability, combined with his erratic behavior, fractured the marital relationship beyond repair, ultimately resulting in their separation. This personal tragedy compounded his sense of isolation and failure. The loss of his primary support system pushed him further into the abyss, leaving him desperate for a lifeline—any mechanism that could restore his sense of control, authority, and self-worth.

Exhibit 1: Public awareness poster distributed by The Digital Consumer Watchdog Group highlighting the deceptive practices of Lunar Astro.

CHAPTER 5

The Abyss: Deepening Depression and the Search for Answers

Following his separation, Giri's depression reached its absolute nadir. Isolated, professionally unmoored, and emotionally devastated, he began a frantic search for meaning and relief. Traditional avenues of recovery, such as therapy or returning to the entry-level job market, seemed either inaccessible or too damaging to his fragile ego. It was during this period of profound desperation that he began seeking out astrologers.

Initially, he approached them not as a student, but as a broken client looking for a glimmer of hope, a prediction of better times, or a cosmic justification for his string of failures. He spent what little money he had on consultations, desperate for someone to tell him that his failures were the result of planetary alignments rather than personal shortcomings. This exposure to the world of astrology was a turning point, providing him with a firsthand look at the industry's inner workings.

CHAPTER 6

A Desperate Pivot: Turning to Astrologers

Deepanshu Giri's initial interactions with the astrological community were born out of personal crisis, but they quickly evolved into a calculated observation of a highly profitable business model. During his numerous consultations, a profound realization began to take shape. He noticed that the astrologers did not need to provide empirical proof, mathematical certainty, or tangible results—the very things that had defeated him in robotics and shipping.

Instead, their authority rested entirely on the client's belief, fear, and vulnerability. For a man who had repeatedly failed in fields requiring verifiable competence, this environment offered a tantalizing alternative: a realm where confidence, rhetoric, and psychological manipulation could substitute for actual skill. He realized that in the business of selling hope, the product never has to undergo quality control.

CHAPTER 7

The Apprentice: Learning the Trade

Transitioning from a desperate client to an eager student, Giri began to study astrology. He immersed himself in the community, learning the jargon, the psychological hooks, and the methodologies used to keep clients engaged and paying. However, his approach to learning was not rooted in a genuine desire for spiritual enlightenment or esoteric mastery, but rather in a calculated effort to understand the mechanics of the business.

He studied under established figures in the field, most notably Sunil John of Saptarishis Astrology. Giri was an attentive apprentice, but his focus was on extraction rather than contribution. He meticulously noted how courses were structured, how consultations were priced, and how clients were retained. It was here that Giri learned the foundational techniques that he would later appropriate to build his own empire, setting the stage for his first major act of professional misconduct.

CHAPTER 8

The Art of Plagiarism: Stealing Intellectual Property

The cornerstone of the Lunar Astro fraud is intellectual property theft. As documented in the Investigative Dossier by The Digital Consumer Watchdog Group, Giri systematically stole methodologies from his mentors to build his curriculum. The most egregious example is the theft of the "BCP" technique from his former teacher, Sunil John.

Giri repackaged this stolen knowledge, rebranded it as his own "Paribhraman Paddhati," and began selling it as original, groundbreaking work. He stripped away the original attributions to present himself as a visionary.

"No 1 fraud in the world. Sunil John saab se bits and pieces of knowledge chori ki aur public ko fraud karta hai with half baked knowledge... A total conman deepanshu FRAUD giri."

— Srinivas (@techy_srini), Former Associate (May 11, 2023)

Evidence from ConsumerComplaints.in highlights that Lunar Astro previously featured a "dedicated to Sunil John" disclaimer on their website, which was quietly scrubbed once the course material was fully copied and monetized. This act of

plagiarism provided Giri with the product he needed without the effort of original research.

CHAPTER 9

The Epiphany: Astrology as a Zero-Investment Enterprise

Armed with stolen knowledge and a deep understanding of client psychology, Giri experienced a dark epiphany. He realized that astrology, particularly when conducted online, is a highly lucrative, zero-investment enterprise. Unlike engineering or shipping, there was no need for physical inventory, expensive equipment, supply chains, or verifiable quality control.

The only requirements were a website, aggressive marketing savvy, and a willingness to exploit the vulnerable. He recognized that money, fame, and a cult-like following could be generated rapidly by selling hope and fear. The profit margins were astronomical because the product was entirely intangible. This realization marked the definitive shift from a depressed, failed engineer to a calculating digital opportunist ready to scale his operation.

Exhibit 2: Watchdog poster exposing the IP theft and the rebranding of stolen astrological techniques.

CHAPTER 10

The Birth of Lunar Astro: Establishing the Brand

With his stolen curriculum and a clear business model in mind, Giri founded Lunar Astro. He leveraged his technical background—not to build robots, but to build a digital infrastructure designed to maximize reach and revenue. He set up the initial websites, payment gateways, and social media profiles, positioning himself as a master astrologer with exclusive, ancient knowledge.

The brand was built on a foundation of fabricated authority, utilizing the "Paribhraman Paddhati" (the stolen BCP technique) as its unique selling proposition. Lunar Astro was not conceived as a center for spiritual guidance, but as a highly optimized sales funnel designed to convert human desperation into financial profit. The branding was slick, professional, and designed to mask the lack of genuine substance behind the enterprise.

CHAPTER 11

The Digital Architect: SEO Manipulation and Domain Flooding

Unlike traditional astrologers who rely on word-of-mouth and local reputation, Giri utilized his technical background to engineer a digital monopoly. He employed aggressive Search Engine Optimization (SEO) tactics, specifically a strategy known as "Domain Flooding." By purchasing and operating multiple domains (such as [lunarastro.org](#), [consultlunarastro.com](#), and others), he created an artificial echo chamber.

This tactic was designed to dominate the first page of Google search results, effectively burying any negative reviews, scam reports, or warnings from defrauded consumers. Furthermore, this network of interconnected sites was optimized to trick Google's AI Overviews into presenting Lunar Astro as a universally acclaimed and legitimate institution. By controlling the search narrative, Giri ensured that potential victims only saw what he wanted them to see.

CHAPTER 12

Manufacturing Consent: Quora Spam and Fake Reviews

To build the illusion of credibility and counter any organic negative feedback, Giri orchestrated a massive campaign of manufactured consent. He recognized that modern consumers rely heavily on peer reviews before making high-ticket purchases. Consequently, he deployed proxy students and paid operatives to spam platforms like Quora, Trustpilot, and Google Reviews with fake, glowing testimonials.

These fabricated reviews praised his uncanny accuracy, life-changing advice, and unparalleled expertise, creating a false narrative of overwhelming success. This artificial social proof was a critical component of the sales funnel, designed to disarm skeptical consumers and convince them to part with their money. The sheer volume of these fake reviews made it incredibly difficult for genuine complaints to gain traction or visibility.

CHAPTER 13

The "Bait-and-Switch": The Core Consumer Fraud

The primary revenue engine of Lunar Astro was a classic "Bait-and-Switch" scam, meticulously documented by The Digital Consumer Watchdog Group. Consumers were lured in by Giri's heavily marketed persona and paid premium fees—often upwards of ₹5,000—expecting a personal, one-on-one consultation with the "master" himself.

However, clients were routinely subjected to a deceptive bait-and-switch. After waiting for weeks or even months, they were informed at the last minute that Giri does not take personal consultations. Instead, they were offloaded to inexperienced, proxy students who provided substandard, generic readings.

"The consumer booked a consultation, waiting over a month, only to be informed right before the meeting that Deepanshu Giri does not take personal consultations... the coordinator rudely canceled the appointment and refused to provide clarity on a full refund."

— **Disha Maladkar, ConsumerComplaints.in (Nov 23, 2023)**

Exhibit 3: Documentation of the Bait-and-Switch tactic used to defraud consumers of premium consultation fees.

CHAPTER 14

The No-Refund Policy: Trapping the Victim

When consumers realized they had been victims of the bait-and-switch tactic and demanded refunds for services not rendered as advertised, they encountered a hostile and impenetrable wall. Lunar Astro's customer service coordinators were explicitly instructed to refuse full refunds, often offering only a 50% return or outright denying the request under the guise of "administrative fees."

If a consumer persisted, cited consumer protection laws, or threatened to expose the scam online, the standard operating procedure was to block their communication channels entirely. This aggressive no-refund policy ensured that the enterprise retained the fraudulently obtained funds, leaving the victims financially exploited, emotionally distressed, and without recourse.

CHAPTER 15

The Troll Farm: Intimidation and Silencing Critics

To protect his lucrative enterprise from exposure, Giri established a digital enforcement arm—a troll farm composed of proxy students and loyalists like Satvik Saini and Ajay Rajan. When genuine victims managed to post negative reviews or when whistleblowers attempted to expose the IP theft, this troll farm was activated.

Their tactics went beyond mere disagreement; they engaged in organized digital harassment. They defamed competitors, mass-reported negative content to trigger automated takedowns on platforms like YouTube and Trustpilot, and flooded comment sections with vitriol. This campaign of intimidation was designed to force victims into silence, ensuring the sales funnel remained untarnished by the truth.

CHAPTER 16

Weaponizing the Law: Cyber Cell Threats

The most alarming tactic employed by Lunar Astro's enforcement arm was the weaponization of legal threats. When digital harassment failed to silence a critic, Giri and his proxies escalated to threatening victims with "cyber cell tracking" and police action. They preyed on the average citizen's fear of legal entanglement and police harassment.

Victims who posted honest reviews were sent intimidating messages claiming that their IP addresses had been tracked and that defamation lawsuits or criminal charges were imminent unless the reviews were immediately deleted. This psychological warfare was highly effective, coercing many traumatized victims into removing their warnings and allowing the fraud to continue unabated.

CHAPTER 17

Social Media Dominance: The Illusion of Authority

Deepanshu Giri understood that in the digital age, perception is reality. He invested heavily in paid marketing and social media dominance to construct an unassailable aura of authority. Through highly produced YouTube videos, targeted Facebook ads, and a curated Instagram presence, he projected the image of a wealthy, successful, and spiritually enlightened guru.

This carefully crafted persona stood in stark contrast to his earlier failures in engineering and shipping. The social media dominance served a dual purpose: it attracted a continuous stream of new victims into the top of the sales funnel, and it intimidated potential critics by showcasing his apparent power, wealth, and reach. He bought the appearance of legitimacy.

Exhibit 4: Exposing the troll farms and digital intimidation tactics used by Lunar Astro proxies.

CHAPTER 18

The Psychology of the Scam: Exploiting Vulnerability

The success of the Lunar Astro fraud relies heavily on the psychological exploitation of its victims. Giri, having experienced profound depression and desperation himself, understood exactly how to manipulate those in similar states. The marketing materials and consultation scripts were designed to prey on individuals facing financial ruin, health crises, or relationship breakdowns.

By offering absolute certainty and cosmic solutions to complex human problems, Lunar Astro bypassed the critical thinking faculties of its clients. The scam was not just financial; it was a profound emotional violation. Giri monetized despair, turning the deepest vulnerabilities of individuals seeking help into a highly profitable revenue stream.

CHAPTER 19

Case Studies in Exploitation: The Human Cost

The true impact of the Lunar Astro scam is best understood through the experiences of its victims. The Investigative Dossier highlights numerous case studies that illustrate the human cost of Giri's enterprise. From individuals like Disha Maladkar, who were subjected to the bait-and-switch and denied refunds, to former associates like Srinivas, who witnessed the IP theft firsthand, the pattern is consistent.

These case studies reveal a systematic disregard for consumer rights and basic ethical standards. The victims were not merely collateral damage; they were the essential fuel for the Lunar Astro revenue engine. Their stories of financial loss and emotional manipulation stand as a stark indictment of the entire operation.

CHAPTER 20

The Watchdog Response and Conclusion

In response to the growing number of victims and the sophisticated methods used to silence them, independent researchers and consumer advocates formed "The Digital Consumer Watchdog Group." Recognizing that traditional legal avenues were often too slow or easily manipulated by Giri's intimidation tactics, the group adopted a decentralized, digital-first approach to expose the fraud.

The story of Deepanshu Giri and Lunar Astro is a cautionary tale of the digital age. It illustrates how an individual, driven by personal failure and a desire for wealth,

can leverage technology, psychological manipulation, and intellectual property theft to build a highly lucrative, fraudulent enterprise. The transition from a failed robotic engineer to a wealthy "astrologer" was not a spiritual awakening, but a calculated pivot to a zero-investment business model that exploits human vulnerability. The ongoing efforts of The Digital Consumer Watchdog Group serve as a vital countermeasure, exposing the mechanics of the scam and providing a blueprint for protecting consumers in an increasingly unregulated digital landscape.
